## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1 - 3, 7 and 21, drawn to a method for reversing presbyopia, classified in class 435, subclass 183, for example.
  - II. Claims 4 - 6, drawn to a method for increasing amplitude of accommodation in a human eye, classified in class 424, subclass 78.04, for example.
  - III. Claims 8 - 20, drawn to a method for treating presbyopia, classified in class 424, subclass 94.1, for example.
  - IV. Claims 22 - 33, drawn to a composition, classified in class 424, subclass 94.5, for example.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions IV:I, IV:II and IV:III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown:
  - (1) the process for using the product as claimed can be practiced with another materially different product or
  - (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)).In the instant case the methods for treating and/or reversing presbyopia could be accomplished with laser,

Art Unit: 1651

the method for increasing amplitude of accommodation could be practiced with surgical methods.

The inventions of groups I:II, I:III and II:III are directed to different inventions which are not connected in design, operation, and/or effect. These methods are independent since they are not disclosed as capable of use together, they have different modes of operation, they have different functions, and/or they have different effects. One would not have to practice the various methods at the same time to practice just one method alone.

The several inventions above are independent and distinct, each from the other. They have acquired a separate status in the art as a separate subject for inventive effect and require independent searches (as indicated by the different classification). The search for each of the above inventions is not co-extensive particularly with regard to the literature search. Further, a reference which would anticipate the invention of one group would not necessarily anticipate or even make obvious another group.

Because these inventions are distinct for the reasons given above and the search required for one group is not required for the other groups, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
